PulseTwin · Research report

Team Gimites · Yashwanth M (leader), Kalashikam Vijay Krishna, Subiksha K, Shakthi K

Updated observations · SESSION DATA · Model 1.1.0 · 2026-10-24T12:29:12.921Z

> Research simulation only. Not diagnosis, treatment advice, or clinical validation. Conditional associations are not causal effects.

Observation history

Period	2026-01-01 to 2026-04-01
Daily records	91
Current modeled SBP	138.88 mmHg

Hypothetical scenario

Movement	12000 steps
Sleep	7.5 hours
Sodium	2000 mg
Stress	4 / 10
Horizon	28 days
Projected SBP	127.99 mmHg
99% predictive interval	112.70–143.28 mmHg
Difference vs unchanged habits	-10.89 mmHg

Chronological holdout

Training / test	77 / 14 days
Twin MAE	3.21 mmHg
Training-mean MAE	3.53 mmHg
Last-reading MAE	5.67 mmHg
Interval coverage	100%
RMSE / bias	4.31 / -0.08 mmHg

Data review and boundaries

0 heuristic flags; 0 highly correlated pairs. No observations removed. Holdout habits are known inputs; this is not prospective validation.

- Research simulation only. Not medical advice or a validated medical device.
- Observational associations do not establish causal intervention effects. Do not change medication based on this tool.
- Intervals reflect model assumptions; they do not cover all confounding, measurement bias or clinical uncertainty.
- Extrapolation beyond observed range: steps. Interpret scenarios cautiously.
